

Excel for Accountants

Duration: 18 hrs | Level: Intermediate

Pivot tables, lookup formulas, and automation techniques built specifically for finance and accounting work.

Curriculum Covered

- Data cleanup — Text to Columns, Trim, Remove Duplicates
- Core formulas — SUMIFS, COUNTIFS, IF/IFS
- VLOOKUP, XLOOKUP, and INDEX-MATCH
- Pivot Tables for MIS and variance analysis
- Conditional formatting for exception reporting
- Building a bank/vendor reconciliation template
- Dashboard basics — charts and slicers
- Introduction to recording simple macros

Key Study Notes

Prefer XLOOKUP over VLOOKUP where your Excel version supports it — it looks in either direction and does not break when columns are inserted, which is a common cause of silent errors in reconciliation sheets.
